

To fix: 0 connections to route, 0 floating grounds

Solid marker = pad on the FRONT (F.Cu). Faded marker and dashed outline = pad on the BACK (B.Cu).
The dashed line is the connection to MAKE, not a route to follow -- take whatever path the board allows.
A floating ground needs a via beside the pad, landing in the plane on the other layer, plus a short track to it.
Board 36.1 x 58.1 mm, drawn at 4x. Ground pour islands are not shown.
